A Great Company

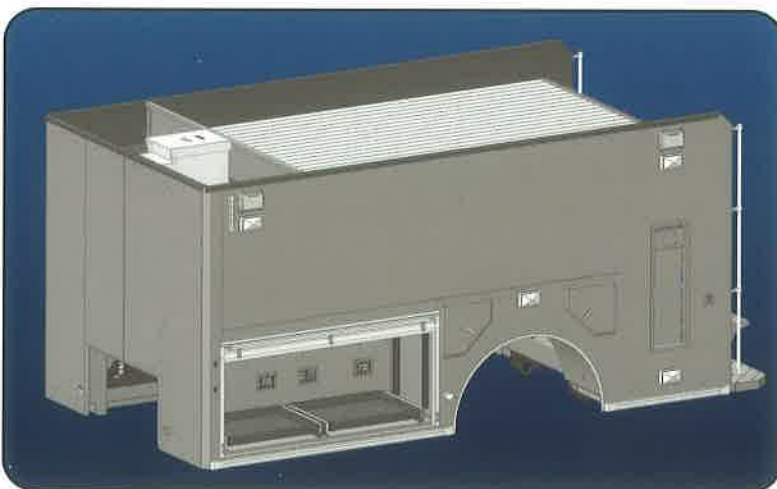

BUILT FOR LIFE™

Custom Fire Apparatus, Inc. is the leading innovator in precision laser cut, hidden fastener fire truck construction. And there's only one reason we do it – because it's simply the best way to build a body to fit together perfectly and last a lifetime. We use button-socket-head cap screws and Ny-Lok fasteners to ensure unmatched durability. Our bolted construction provides tolerances that are 25 times better than the typical welded body.

That's just one of the reasons we offer a transferable lifetime warranty on our bodies. So you can do three things: count on your investment to last; re-chassis your tanker if you need to; or increase your resale value.

TRUE CUSTOM DESIGN

We engineer and build some of the best fire apparatus bodies you'll find anywhere because each one is custom designed and built exactly how our customers want it.

Our ultra-precise custom build process starts with an advanced engineering system which allows unmatched customization and precision.

SINGLE AXLE TANKER

Single axle tankers can carry up to 2000 gallons of water while keeping the wheelbase low making navigation through narrow streets easier.

TANDEM AXLE TANKER

Tandem axles tankers can carry anywhere from 2000 to 4000 gallons of water necessary for those rural fire operations.

TANKER PUMPER

Tanker pumpers offer a full size pump and the ability to carry large quantities of water. These tankers can be single or tandem axle, depending on the water capacity.

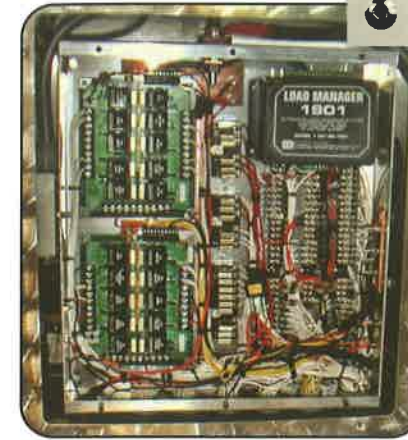

The Custom Advantage

A STRONG FOUNDATION

CustomFIRE leads the industry with the most comprehensive tank support. Our tank cradle consists of lateral heavy wall support tubes and a structural support frame around the perimeter. We also rubber line the framework with our Soft-Ride rubber lining so you've got protection front to back, side to side and it will never rust away because we construct our subframe from 304 grade stainless steel.

ELECTRICAL SYSTEMS

Choose from hardwired, plug-and-play or multiplexed electrical systems. Whichever you prefer, our wiring harnesses are routed through the body - not under it - provided protection from weather, road grime, and accidental snags.

STRONG BODIES

Our bodies are available in 12-gauge and 14-gauge 304L stainless steel, and 5052 H32 aluminum.

FLEXIBILITY IN PUMP SYSTEMS

We've spent years working with pump manufacturers to develop custom pump configurations which allow us to efficiently package our pump systems while also optimizing flow rates and drafting capabilities. We offer pumps and foam systems from Waterous, Hale, and FoamPro®. Our entire plumbing system, piping and manifolds, features round stainless steel construction to provide optimum flow characteristics, strength and corrosion resistance. In addition, we are certified to engineer our own UPF poly tanks.

DUMP CHUTES

We offer high capacity gravity dumps with electric or manual tele-chutes or electric or manual drop-down chutes.

STAINLESS PLUMBING

The entire plumbing system - piping and manifolds - features stainless steel construction to provide strength, corrosion resistance, longevity and minimal maintenance for the life of the tanker.

SMARTSPACE™

We'll give you efficient and functional SmartSpace™ packaging solutions to make the most of your space and wheel-base. We'll optimize your tanker for maximum storage and maximum access.

Precision Customization Provides

FRONT BUMPER

Front Bumper Hosewell

Front Bumper Suction/Discharge

Pump-n-Roll

PUMP CONFIGURATIONS

Side Pump Controls

Top Pump Controls

Rear Mount Pump

Portable Pump

COMPARTMENT SPACE

Pull-Out Trays and Tool Boards

Pull-Out Drawers

Adjustable Shelving

Unsurpassed Tanker Performance

GRAVITY DUMP CHUTES

Electric Tele-Chute

Drop-Down Dump Chutes

Manual Dump Chute Extension

TANK, LADDER, & HOSE STORAGE

Recessed Ladder Storage

Drop-Down Portable Tank Storage

Slide-In Suction Hose Storage

TANKER BODY STYLES

Dry Side Tanker Body

Compartmented Tanker Body
